

**Speech-to-Text Converter is a voice recognition Android application. It powers the users to speak aloud at the microphone and then the text appears on the screen.**

### ❖ How to Use Speech-to-Text converter on Android?

Here is how you can activate Android Speech-to-text Converter on your device:

1. Open the application and allow access to use the microphone and media of your phone.
2. Click on the language menu button and choose your preferred language from the menu.

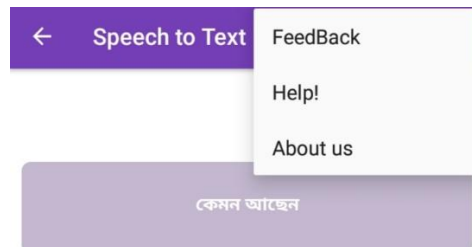

3. On the same window, there is a 'Start' button, right under the language menu. Click on that button and speak clearly in your selected language.

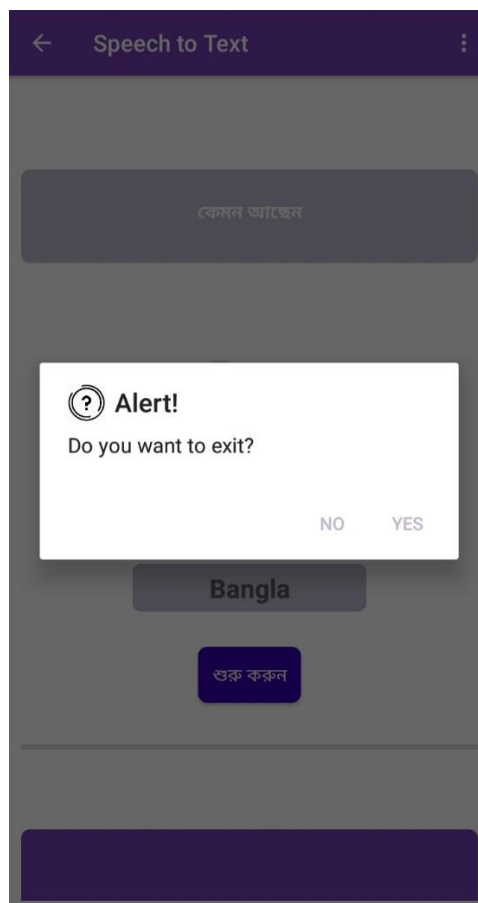

4. You will be able to find the speech converted into text in your selected language and it is shown at the top middle on the window.

5. You will be able to select and edit the generated text.
6. On the top right position, there is another menu for, FeedBack, Help! About us.

7. To exit from the application, click on the back button on your phone and an Alert window will pop out to confirm your exit.

Good luck.
